Category: Security

Duration: 24.00 hours (3 days)

19.5 CPD Hours

Rating: ★ 4.6 (5,878 reviews)

Course Information

Delivery Format: Instructor Led - Online

Course Overview

Information security is the preservation of confidentiality, integrity and availability of information (ISO/IEC 27000 definition). Information security is gaining importance in the Information Technology (IT) world. Globalization of the economy is leading to an ever-increasing exchange of information between organizations (their staff, customers and suppliers) and an explosion in the use of networked computers and computing devices. The core activities of many companies completely rely on IT. Enterprise resource planning (ERP) management systems, the control systems that govern how a building runs or a manufacturing machine functions, day-to-day communications - everything - runs on computers. The vast majority of information - the most valuable commodity in the world - passes through IT. Information is crucial for the continuity and proper functioning of both individual organizations and the economies they fuel; this information must be protected against access by unauthorized people, protected against accidental or malicious modification or destruction and must be available when it is needed. Companies and individual users of technology are also beginning to understand how important security is and are beginning to make choices based on the security of the technology or service.

About This Course

Information security is the preservation of confidentiality, integrity and availability of information (ISO/IEC 27000 definition). Information security is gaining importance in the Information Technology (IT) world. Globalization of the economy is leading to an ever-increasing exchange of information between organizations (their staff, customers and suppliers) and an explosion in the use of networked computers and computing devices. The core activities of many companies completely rely on IT. Enterprise resource planning (ERP) management systems, the control systems that govern how a building runs or a manufacturing machine functions, day-to-day communications - everything - runs on computers. The vast majority of information - the most valuable commodity in the world - passes through IT. Information is crucial for the continuity and proper functioning of both individual organizations and the economies they fuel; this information must be protected against access by unauthorized people, protected against accidental or malicious modification or destruction and must be available when it is needed. Companies and individual users of technology are also beginning to understand how important security is and are beginning to make choices based on the security of the technology or service.

Who Should Attend

Security professionals. This module is intended for everyone who is involved in the implementation, evaluation and reporting of an information security program, such as an Information Security Manager (ISM), Information Security Officer (ISO) or a Line Manager, Process Manager or Project Manager with security responsibilities. Basic knowledge of Information Security is recommended, for instance through the EXIN Information Security Foundation based on ISO/IEC 27001 certification.
