Learning Outcomes

Upon successful completion of this course, participants will be able to:

After completing this course, you should be able to:

Describe the Server Automation (SA) core architecture and key components of SA

Integrate unmanaged servers into the SA managed environment and discover server information through SA

Use the Operation System (OS) Provisioning feature of SA to automate the installation of OS onto servers

Provision virtual servers and manage their server lifecycle through SA

Create static and dynamic device groups to manage multiple servers as groups

Manage packages as part of the software management feature in SA

Use a policy-based management methodology to provision software and manage software updates

Describe and use Application Deployment Manager (ADM) to manage an application lifecycle using SA

Use the Application Configuration feature of SA to manage the values in configuration files on managed servers

Manage patches on various OS platforms using a patch policy or software policy

Use the Audit and Remediation feature of SA to ensure servers and applications are compliant with defined best practices or corporate policies

Use the Compliance feature of SA to discover out-of-compliance servers in the managed environment and ensure that they are in compliance with corporate policies

Use the Global Shell and Global File System (OGFS) features to explore and manage servers in an SA environment

Create, manage, and execute scripts | SA to manage servers or server groups
